You answered 3 of 3 questions correctly. Continue watching Retake quiz

Question 1 of 3

What command(s) can you type in a Python interpreter to check if the tkinter package is installed correctly?

test tkinter test _tkinter

tkinter()

import tkinter import _tkinter

Correct Successful execution of these commands confirms that the module and its compiled binary are installed correctly.

import TKinter

Question 2 of 3

Which statement is incorrect?

The tkinter package can only be tested using the IDLE interpreter. Correct This is indeed an incorrect statement since tkinter tests can be initiated from another interpreter.

On macOS, Python and Tcl/Tk may need to be installed separately.

The IDLE interpreter is written using the tkinter package.

The tkinter package provides a test function.

Question 3 of 3

What function or method will you use to put a text label on a window?

Label()

mainloop()

Tk()

pack()

Correct The "pack()" geometry management method places a label on a window.
