Retake quiz

Question 1 of 3

Using the place geometry manager, what coordinates will you use to show a label whose center is 100 pixels to the right and 50 pixels above the center of the window?

- `place(x=-50, y=100, anchor='center')`
- `place(relx=0.5, rely=0.5, x=50, y=100)`
- `place(x=0.5-50, y=0.5+100, anchor='center')`
- `place(relx=0.5, rely=0.5, x=-50, y=100, anchor='center')`

Correct

This sets the relative location to the center and then moves an absolute number of pixels from there.

Question 2 of 3

Which statement is incorrect regarding the pack geometry manager?

- It is useful when the widget needs to fill the entire parent.
- It is useful when stacking widgets.
- It is ideal for complex layouts.
- It is easy to use.

Correct

The pack geometry manager provides simpler capabilities that limit support for complex user interfaces.

Question 3 of 3

What property will you use to stretch a widget across its entire grid cell?

- `padx`
- `stick`
- `ipady`
- `weight`

Correct

The stick property can be used to select the sides of the cell the widget will be anchored to.
